

SYMMETRY™ ENTERPRISE v8

Symmetry Enterprise is a comprehensive Access Control and Security Management System designed for even the largest organizations with the most complex security requirements.

Symmetry Enterprise is suitable for single location installations or for major deployments across a campus, city, or country, or globally from a centrally location.

At the heart of Symmetry Enterprise is an ability to manage access to buildings, process alarms from across the organization, and to significantly improve the level of security by responding to incidents much more quickly and more effectively. This is achieved by integrating live and recorded video feeds, graphical building plans and other security technology into a fully integrated solution.

The Symmetry Enterprise software platform is extremely powerful while being easy to learn and a pleasure to use. Based on a Microsoft® .NET architecture it runs using a Microsoft SQL Server Database which easily scales to run the security platforms for some of the largest public and private sector organizations across the world.

Supplied with a very comprehensive range of standard features, the system can be expanded further by adding licenses for card readers and security cameras and a range of totally integrated optional software modules.

The open architecture of Symmetry Enterprise and the XML Open Integration Module ensure that integration with other security systems and corporate applications can be achieved easily using the latest software development techniques.

KEY FEATURES

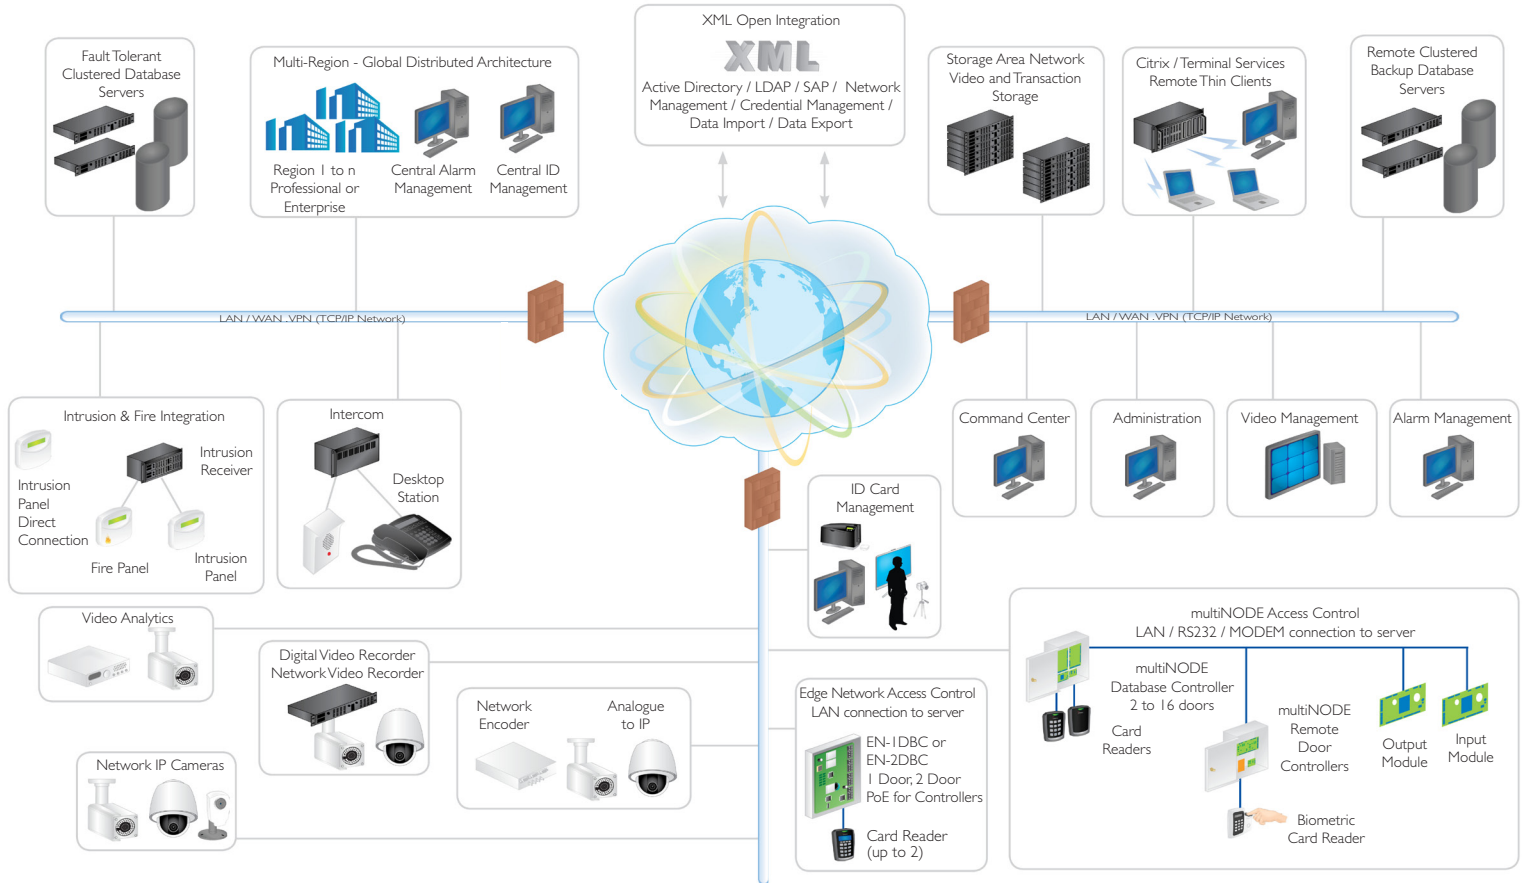

- Scalable Access Control and Security Management Solution for large organizations
- Unlimited client workstations, card readers and card holders
- Employs the very latest thinking in user interface design
- Fully network compatible using minimal bandwidth
- Cluster aware version available and virtualization support
- Video Badging and Visitor Management software as standard
- Database partitioning for multiple company or departmental systems
- Comprehensive alarm handling features
- Fully integrated Video Management
- Symmetry Video Management as standard
- Open architecture with numerous integration options
- Uses Microsoft SQL Server Database

OPTIONAL SOFTWARE MODULES

A range of fully-integrated additional modules designed to enhance the system and provide higher levels of flexibility and integration. Optional features include:

- Active Directory single sign-on
- Guard Patrol Management
- Intercom Management
- Intrusion Management
- Muster Management (Safety Roll Call)
- Threat Level Manager
- Workflow Designer
- XML Open Integration Module
- Web Access Module
- SymmetryWEB™
