SYMMETRYWEB™
WEB CLIENT

SymmetryWEB enables users to operate the Symmetry Security Management System and perform key functions via a user friendly and modern web interface.

Security and building personnel can use the SymmetryWEB client to set up new card holders and assign access codes to card readers and doors. SymmetryWEB removes the need to install or maintain local client software, while still providing access to data.
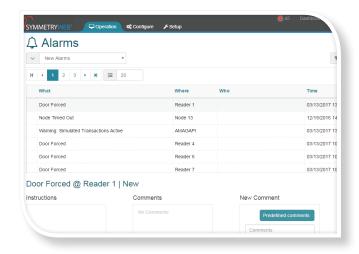

Users are also able to receive and view real time alarms via the SymmetryWEB client interface. Security and building personnel can view alarms and receive live updates, see instructions, enter comments, view card information and clear alarms via SymmetryWEB.
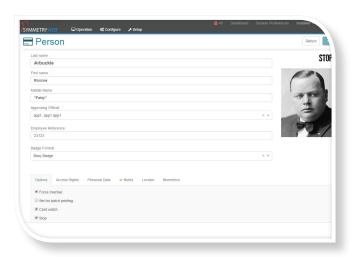

The advanced web application allows users to interface with the Symmetry Security Management System using a standard web browser from a desktop workstation or mobile device such as a tablet or smart phone.

The SymmetryWEB client interface is designed to support the card holders and alarms within Symmetry. An intuitive, user friendly layout displays the applications, card holders, alarms and devices available to the user according to their privileges. The navigation is simple and easy to follow enabling users to view a complete prole of card holder information, including all card holder options, access assignments and personal information.

KEY FEATURES
- Instant access to Symmetry Security Management System from a web enabled device
- Available for Symmetry Professional and Enterprise
- Card Holder Enrollment and Management
- Configure access codes
