# DesignCams

 **Dallmeier**

*"If lighting manufacturers were as creative as camera manufacturers, a light would still be limited to a pair of wires dangling from the ceiling, a connector socket and a light bulb. They'd probably say 'It's lighting the room, so what?!'"*

*Th. Dallmeier*

Thomas Dallmeier

DesignCams

## DesignIdea

A camera is first of all a tool which has to fulfil its purpose of capturing high-quality images. But, who says that reliable functionality and high-quality design are mutually contradictory?

Many customers demand more than just a technically sound product. Besides quality, performance and reliability, the product's design and exclusivity are also important factors influencing the purchasing decision. Dallmeier is the first video security system manufacturer who has addressed this matter and developed its cameras so that they integrate seamlessly into any environment and blend in with any decor.

With DesignCams you are free to choose. Make your cameras more eye-catching with classy designs that stand out, or make them more discreet with an appearance and ambience which merge with their surroundings. Then your video surveillance won't look as if it is technical equipment added later but instead it will be part of the overall interior design, more like ornamentation which gives the room a very special atmosphere.

*High-tech in its most elegant form. Dallmeier's DesignCams combine state-of-the-art technology with aesthetic perfection to produce comprehensive, high-quality surveillance solutions.*

# DesignCams

**Wood.** A raw material that exudes calm, warmth and security. As a renewable organic material, using wood has always maintained a close bond between man and nature. The annual growth rings bear witness to the living power inherent in the tree.

Ever since man discovered fire, wood has been essential for man's survival. Only by making use of this fuel was man able to survive the cold winters and prevail in the world.

Besides, wood was an indispensable building material, enabling technological progress as well as the exploration of the world by seafarers.

DesignCams

*The delicate and unique grain is what gives wood its elegant look and also what individualises every piece as a unique specimen.*

# DesignCams

## DesignCams

**Burl wood.** Roots are the essential foundation of life for any plant. They are like pipelines, supplying water and essential minerals from the soil.

Burl wood reflects the life history of the tree and so no two pieces are the same.

Tree roots also fulfil another important role: their strength gives the tree its foothold and its stability, often for centuries.

*Modern yet classic.  
The sensuous texture of a wooden surface, the noble appearance of lacquered forms, the cool clarity of metal bodies – DesignCams by Dallmeier combine state-of-the-art technology with design perfect in form.*

# DesignCams

**Walnut.** The wood of the walnut tree is hard, but light and flexible at the same time. Owing to its excellent qualities it is especially useful for achieving a sophisticated interior finish. It is characterised by

its particular colouration, distinctive contrasts and linear structures. Walnut creates a warm, cosy and high-quality ambience in any interior.

DesignCams

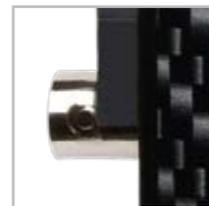

*Exceptional architecture and high-quality interior design harmonise with security technology in its most elegant form.*

# DesignCams

**Carbon.** A modern-day synthetic material, reinforced with carbon fibre. The light, yet extremely robust material has become a vital and versatile substance.

Carbon captivates us by its timeless, perfectly formed appearance and a certain aesthetic elegance.

DesignCams

*Position useful equipment unobtrusively, or stylishly accentuate state-of-the-art technology.*

# DesignCams

## DesignCams

*DesignCams by Dallmeier represent the translation of traditional forms and functions into modern camera technology.*

**Stone.** A solid mineral mass, formed in the course of the earth's history. Stones which are no longer in their original place but have been transported to other locations by rivers or the human hand, affect us in a special way.

The alien environment makes them even more interesting, increasing their aura and presence.

Holding a stone that has been deformed by the forces of nature over millions of years and smoothed during a long journey in a riverbed, one can literally feel that aura. It's not without good reason that magical and medicinal properties are attributed to stones.

DesignCams

# DesignCams

*Whether flashy or discreet – the DesignCams are a real enhancement to any location.*

**Crystal.** Even the word sounds like a charm. The multifaceted light display from the cut crystal gives Swarovski\* stones a magical attraction.

Their alluring sparkle sets any room alight and steeps their surroundings in a sumptuous light.

The scintillating works of art are an expression of elegance and a reflection of beauty.

\*Swarovski is a trademark or registered trademark of the company Swarovski AG headquartered in Feldmeilen, Switzerland.

# DesignCams

**Metal.** The polish and hardness of metals and alloys have always mesmerised mankind. Metals are a sign of affluence and power. Without metal the world we live in would be inconceivable.

Metals were so crucial to the evolution of man that major eras were

later named after the materials used during the respective periods: copper age, bronze age and iron age.

# DesignCams

Silver

Golden brushed

Golden gleaming

Coppery brushed

Chrome

Chrome black

*The captivating characteristic of metal is its immaculate, purist form. Whether brushed or polished, the modern appearance creates an incomparable atmosphere in any situation.*

# DesignTechnology Cam<sub>in</sub>PIX® Techuology

## DesignCams

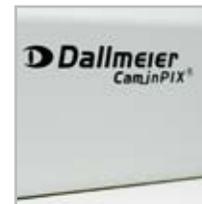

### Cam<sub>in</sub>PIX® Techuology

**Technology.** Dallmeier's DesignCams combine aesthetics with the latest technology, because all DesignCams are equipped with the innovative **Cam<sub>in</sub>PIX®** technology.

Dallmeier is the world's only developer and manufacturer of this technology, and it is already being used very successfully in many CCTV/IP projects. With it, it is now possible to

solve video security technology problems which were deemed insoluble with conventional technology.

The most difficult lighting situations with strong backlighting or scenes affected by extreme and constantly changing environmental influences can be mastered with **Cam<sub>in</sub>PIX®** technology.

# DesignRange

## DesignRange

*Dallmeier design products. State-of-the-art and innovative technology as veritable art object.*

**Dallmeier Design.** Take advantage of the unlimited possibilities available to you within the Dallmeier design programme.

Dallmeier manufactures each and every product according to your specifications. Get in touch with us:

[design@dallmeier.com](mailto:design@dallmeier.com)

By the way:

Thanks to its modular construction, any already installed Picodome® V2 camera can be easily upgraded to a DesignCam.

# Design Variety

**Multifaceted designs.** With the Dallmeier DesignCams you can choose from a range of different designs\*, create your own design or use shade codes to select a colour which matches your decor. The techniques used by Dallmeier to produce the cameras allow for a variety of designs. So you can order cameras which have been manufactured according to your individual wishes and which blend in perfectly with your decor.

For the external appearance of your new camera you can choose from

the entire Pantone and RAL colour ranges. Or you can have a completely customised design.

You can obtain Dallmeier cameras in your company colour, to match your carpet, or to your own exclusive design supplied directly from the manufacturer.

If there are other things you would like please contact us:

[design@dallmeier.com](mailto:design@dallmeier.com)

\*All designs are high-quality reproductions modelled on the original materials.
