## ● Super LoLux™ "COLOUR IN VIRTUAL ZERO LUX"

This camera has been designed to ensure precise colour reproduction in low light situations. Colours are still clearly visible, even under extremely low light conditions.

## ● ExDR Plus

ExDR (Extended Dynamic Range) Plus function is able to clearly display people and characters in the foreground even when they're up against an extremely brightly lit background. And to make the dark parts of the image more clearly visible, it combines Dual Shutter with AGC function to achieve optimal image quality throughout the entire picture. Remote control is possible with multi-protocol support of not only JVC protocol but Pelco-D and Pelco-P.

## ● Programmable Scene Memory

Eight different preset scene modes are available to support typical situations. Modes are General, Traffic, Day, Night, Low Noise, Wide-D, BLC, and Anti Fog, and each of them is fully programmable to precisely meet the usage environment. Switching between modes is possible via RS-485 or alarm input.

## ● 3D Noise Reduction (3DNR)

3DNR is the powerful method to improve image quality even though it's shot in the dark. Noise data is detected by comparing some continuous frames and reduced by blending it into other frames over time.
