

March Networks Command Center

Software-based video display and
alarm management solution

For customers who need better visibility into what's happening across their organization, and need to handle alarms from potentially hundreds of locations, **March Networks® Command™ Center** provides an enterprise-class, virtual matrix software solution. Command Center's flexible, easy-to-use video display and control, as well as intelligent alarm management and escalation policies, allow for powerful real-time incident assessment and resolution. The software integrates with March Networks recorders and Command Enterprise VMS to equip users with an operations center environment. Get a fully functioning video wall solution without the need for controller wall hardware.

Key Benefits

- ▼ **Immediate visual awareness.** Decode as many as 32 video streams per monitor, from multiple locations; view multiple cameras on the same monitor or video wall at the same time.
- ▼ **Alarm prioritization.** Alarms coming into the system are processed, prioritized, grouped and presented to the operator in exactly the format required for them to take action.
- ▼ **Process guidance.** In the event of an alarm, operators are guided through a workflow process that helps them efficiently respond to that alarm using a series of built-in questions and instructions.
- ▼ **Consistent alarm resolution procedure.** All activity during the resolution of an alarm, including operator's notes, is logged and presented in a uniform format, making it easier to research the pertinent details after the fact.
- ▼ **Alarm search and auditing.** Perform quick, comprehensive searches on alarm history, and get reports on individual alarm entries.
- ▼ **Simple, cost effective design.** Command Center runs on commercial-off-the-shelf (COTS) servers and workstations, and can support multiple display monitors on a single workstation, eliminating the need to integrate specialized and costly video wall display hardware.
- ▼ **Flexible and scalable.** Simply add more PC workstations when additional displays are required; Command Center can decode and display potentially hundreds of video streams.
- ▼ **Intuitive navigation.** Multi-layered maps let you move floor-by-floor through your buildings, and quickly call up detailed plans for any room. Incorporate "hot spots" so you can click on a camera and jump right to that floor.
- ▼ **Simple, fast video display.** Drag and drop the cameras you want displayed onto the video wall.

*Get greater visibility across all of your locations
and respond to alarms quickly via easy-to-follow
escalation procedures.*
