Desktop Reader

The desktop reader is designed to sit next to the PC. It is used for adding tokens to a Net2 system and also for identifying lost cards. Additional workstations can also have desktop readers.

With the Net2 software running, any new token presented above the desktop reader will cause the new user wizard to appear with the appropriate card number displayed. The users details can then be entered and the token issued.

If the token is already known to the system, the relevant users' record will appear.

Installation

The power for the unit is supplied via the USB cable. No additional power supply is required.

Plug the reader into a convenient USB port on the PC using the supplied USB cable.

Stop and then restart the Net2 server program. The device will now be available to the Net2 program.

This unit requires Net2 v3.09 or later software. Please call Technical Support if you require advice or a software upgrade.

Specifications			
Environment	Min	Max	
Operating temperature	0 °C	+55 °C	
Waterproof			No
Electrical	Min	Max	
Voltage	4.75V DC	5.25V DC	USB certified
