The **Genex**® high performance, color simplex multiplexer utilizes the latest in digital video processing technology, providing high-quality recordings or outstanding multi-camera displays.

Available in 9- or 16-channel versions, **Genex** can multiplex up to 9 or 16 cameras for recording on a single VCR. During recording any camera may be viewed independently or combined with others in a sequence. During playback any camera may be viewed independently or combined in a multi-camera display.

Unlike most multiplexers, **Genex** contains a powerful re-sizing engine which uses patented Active Image™ technology to provide broadcast quality, image re-sizing for both multi-camera and zoom displays. This technology allows **Genex** to provide higher quality images with less aliasing.

**Genex** allows live or recorded cameras to be displayed full-screen or combined with others in a picture-in-picture, quad, nine, or sixteen camera display. Cameras may also be displayed sequentially. An adjustable zoom mode provides full control of digital magnification of any camera for closer examination.

An advanced activity detector can prioritize cameras for faster recording and display. The additional Spot monitor output can be used to display full-screen cameras manually, sequentially, or as a result of alarms.

**Genex** is easy to use, offers intuitive push-button controls for operation and password-protected, on-screen menus for easy system setup.

### Notes:

\* Pelco Genex multiplexers can normally decode tapes made with other manufacturer's multiplexers. However, Dedicated Micros models DM/SPG4/S/N/090 and DM/SPC4/D/N/6M must be properly programmed to create tapes that are compatible with Genex multiplexers. Tapes made with DM model SPR2AS/C/M/M are incompatible. (Refer to TechTip 00-3038 for details.)

\*\* When used with 15-bit (standard) Coaxitron® receivers such as the CX9000 Series, the PT7700, and the ED25/27/28/29, the KBD4000 supports all pan, tilt and lens functions and AUX on/off. It will not set or call presets, or support preset scan.

When used with the 32-bit extended Coaxitron® receivers such as Intercept®, Spectra®, and Legacy® LRD41C21/LRD41C22 Series, the KBD4000 will support all of the functions above, including set and call presets and patterns. It will not support programming of preset or pattern labels. If labels for presets or patterns are required, they would need to be programmed with a different control such as the MPT9500.
