

DigiEye Family Integration SDK

Software Development Kit

The DigiEye Family Integration SDK is a professional integration tool that allows DigiEye products and remote applications to communicate through network connections and serial lines using standard IP protocols.

SDK allows you access to all DigiEye data and features and applies them to a non-DigiEye security environment:

- Streaming video and bidirectional audio
- Remote download/playback of recorded images (with activity bar)
- Full audio management (listen to remote audio and send audio information to a remote system)
- Complete dome/PTZ and camera control including OSD and auxiliary controls (SDK supports all extra features included on different dome/PTZ models).
- Local/remote access
- Asynchronous event notification

The DigiEye SDK allows users and integrators to take full advantage of SYAC technologies with the added benefit of a first-rate SYAC service and support program.

The SDK supports you in building and deploying individual solutions by supplying instructions, reference manuals and sample applications. The samples can be customized according to your unique integration needs in a matter of hours.

SYAC is the creator of DigiEye, the world's first networked digital video and audio management system. SYAC products are 100% designed, developed and manufactured by SYAC and have been successfully deployed in stores, banks, educational, industrial, public transport and governmental facilities, airports, parking lots and event venues all over the globe. SYAC's high performance, ultra-reliable intelligent security solutions have been protecting the lives and assets of people worldwide since 1988.
