DigiEye WAP Access

What is DigiEye WAP Access?

DigiEye WAP Access is a DigiEye feature that connects your mobile phone (running WAP client) to a remote DigiEye. You can take a live snapshot, check camera and system faults, view the status of alarms and control any device connected to a remote DigiEye (e.g. doors, lights, TV, heating system etc.)
The DigiEye system needs to be permanently connected to the Internet (ADSL) and have a static IP address (or a dynamic IP address with a name resolution like DynDNS or similar).

Who is it for?

DigiEye WAP Access is perfect for all remote applications: ideal for security staff when doing their rounds and convenient for those away from home who want to keep an eye on their home, holiday residence, yacht or loved ones.

What is it compatible with?

DigiEye WAP Access is compatible with the entire DigiEye product family, which ranges from simple video/audio network servers to multifunctional digital CCTV management systems.
DigiEye WAP Access is just a small part of the many DigiEye centralization options that allow you to create both simple and sophisticated centralization architectures.

What are the benefits?

The DigiEye WAP Access gives you the freedom to move around and at the same time, enables you to be in touch with your security system, cameras and alarms using your mobile phone.

SYAC is the creator of DigiEye, the world's first networked digital video and audio management system. SYAC products are 100% designed, developed and manufactured by SYAC and have been successfully deployed in stores, banks, educational, industrial, public transport and governmental facilities, airports, parking lots and event venues all over the globe. SYAC's high performance, ultra-reliable intelligent security solutions have been protecting the lives and assets of people worldwide since 1988.
