Overview

The RX5M is a Third Millennium styled flush mounted Ligature Resistant reader. The unit is a multi-technology reader suitable to interface with all standard access control systems, and offers impact resistant construction with a high degree of protection against vandalism and malicious attack.

The stainless steel, flush fit assembled housing may be secured to a recessed standard UK Double Gang back box using 2 security screws (supplied) making installation quick and easy.

The primary function of the reader is to prevent anyone from harming themselves, or others, and ensuring that a ligature cannot be attached to the reader. However, the RX5M is also suitable for areas where standard readers might become damaged, such as unsupervised public places, corridors and detention facilities.
