

G4S DELIVERS INTEGRATED SECURITY AROUND THE WORLD

JULY 2020

G4S is the worlds leading integrated security company with operations in around 85 countries. At the core of the business is G4S Integrated Security - our combination of expertise, security professionals, technology and data analytics.

The last six months have seen significant change for G4S. The sale of the conventional cash business has enhanced our strategic, commercial and operational focus and strengthened our financial position.

G4S is transforming, with an intensified focus on our integrated security solutions strategy we are winning business faster and growing stronger than ever before.

Through the launch of the global G4S Academy, it creates an opportunity to share knowledge and work more collaboratively with our customers. Sector specific solutions, and a global approach to risk and investment in technology are delivering clear benefits to our customers and differentiating G4S's offering in the security market.

Here are some examples of G4S Integrated Security that we are delivering for customers around the world.

G4S Americas

In the United States, one of our Security and Risk Operations Centres helps prepare for, monitor and respond to threats from one central location.

The Security and Risk Operations Centre, based in Florida, provides integrated security solutions by seamlessly combining monitoring capabilities, data analytics, enterprise risk intelligence and global response services.

Through actionable data and valuable insights, our experts are able to identify threats early and respond quickly.

Our technology enabled intelligence-gathering and data analytics mean our customers know immediately when incidents occur. They also allow us to support our customers by optimising spend, mitigating risk and enhancing their security programmes.

G4S Europe & Middle East

At a Critical National Infrastructure site in southwest England, G4S's connected security professionals use technology and data to assess threats, manage incidents, and keep a large workforce safe.

The diverse team of highly-trained security professionals have adapted to the changing security climate and now conduct automated fever screening as people enter their site. Specially trained security professionals use the best technology, including G4S's proprietary software RISK360, on this complex, long-term project.

G4S RISK360 allows our team to manage incidents, instantly share information, and detect patterns and trends. The training of our connected security professionals is tailored to the site. They are setting the gold standard do securing critical infrastructure.

G4S Africa

In South Africa, our integration of risk consulting, security professionals and technology, for a global FMCG brand, is underpinned by our data analytics.

G4S security professionals protect valuable goods that are delivered all over the country. From our Security and Risk Operations Centre near Johannesburg, our experts use G4S RISK360 to enable secure and reliable deliveries.

G4S RISK360 provides critical data and analysis that is then used to monitor and deploy resources to the highest risk areas. This data is continually shared with the customer laying the foundation for a partnership that is building a more secure future.

G4S Asia Pacific

In 2019, the Singapore Government asked the industry to prioritise technology over manpower through 'Outcome Based Contracting'.

G4S won an important contract to secure 62 schools using our Threat, Vulnerability, and Risk Assessment (TVRA) Solution. The TVRA risk-based solution combines access control, visitor management systems, biometric time and attendance with patrol and response, incident reporting, and remote CCTV monitoring.

Our security professionals and Security Risk Operations Centre are in control of the situation at all times using cutting edge technology and data analytics to inform the solution.

These are just some of the ways G4S is securing your world.
