

IDTECK Smartcard Read/Writer System in Motorway Tollgate of Croatia

IDTECK(www.idteck.com), a manufacturer of RFID and Biometrics Access control systems provided the smartcard payment system with ECSAT, Croatia for payment system of motorway tollgate. ECSAT is specialized in development of the toll collection systems that provides both "open" toll collection systems and "closed" TCS.

They have installed SR20RW, the 13.56 MHz [MIFARE] Contactless Smart Card Reader / Writer that is designed to program a card. Each tollgate has 2 SR20RW. One is on the upper site for lorries and the other one for general vehicles. Once the driver put their card to the reader, it determines the trip length, applicable price, checks the account status (positive, low balance, black listed), deducts the fare from the account, and opens the barrier. Its smart card is used as not only a payment system but also an entry ticket. Since more tollgates are required extra readers, ECSAT is now preparing 210pcs more from IDTECK, to make its expansion. Smart card solution from IDTECK with ECSAT extensive offering to Croatian tollgates will be of a huge value to its customers who are joining smart card reader system.
