

Delta Scientific's MP5000 Portable Vehicle Barriers Deployed By Fremont City Council

Published on 23 Jun 2017

Delta Scientific, a manufacturer of counter-terrorist vehicle control systems used in the United States and internationally, announced that, reacting to tragedies in London and Berlin, among others, where vehicles were used as weapons against large numbers of pedestrians, the Fremont City Council plans to heighten protection for its citizens. Twelve Delta portable vehicle barricades will be available to protect citizens from errant drivers and vehicles driven by terrorists at events such as the Fremont Festival of the Arts, Niles Antique Faire and Flea Market, Festival of India, parades and other affairs that attract large numbers of people in confined locations.

In an article in the East Bay Times, Fremont Police Chief Richard Lucero emphasized that special events are an important part of a community's fabric. "They provide an opportunity for people to come together in different ways than they do in their ordinary, day-to-day life and have a chance to connect. In order for it to be effective, it's got to be safe." He continued by saying that the potential danger of cars driving into public gathering areas to kill and hurt people is "very real" and that barricades are a "good, flexible way to be able to protect these venues cost efficiently."

Delta MP5000 Mobile Barricades

The totally self-contained [MP5000](#)'s tow into position to control vehicle access within 15 minutes. No excavation or sub-surface preparation is required. Once positioned, the mobile barricades will unpack themselves by using hydraulics to raise and lower the barriers off their wheels. DC-powered pumps will then raise the barrier to keep

vehicles out or lower the barrier to let vehicles through. These mobile deployable vehicle crash barriers carry a K8 rating (M40 ASTM rating), stopping 7.5 ton (6400 Kg) vehicles traveling 40 mph (64 kph).

"We always keep an inventory of the MP5000s for purchase and quick delivery at our manufacturing facility in Palmdale, Calif.," reports Greg Hamm, Delta Scientific vice president of sales and marketing. "In many cases, they are needed for events that come up quickly, such as politician or celebrity visits and other unexpected incidents."
