Inner Range’s Inception Access Control System Upgraded With App And Integration Capability With Milestone Access Control Platform

Published on 6 Jun 2019

Inner Range’s access control system, Inception has been upgraded with a dedicated app and the ability to integrate with the Milestone Access platform.

Inception access control system

Inception is Inner Range’s powerful yet budget-friendly access control and security alarm system.

New and existing customers can now use the Sky Command App to control access remotely. It allows interactive control and live status of areas, inputs, doors and outputs as well as simple or multimode area arming options. Push notifications can be sent to smartphones helping security
Managers stay alert to any changes on site.

Integration with Milestone XProtect VMS

Multiple Inception systems can be integrated with a single Milestone system for multi-site monitoring.

A new integration with Milestone XProtect video management system allows the Inception controller to become the security and access mechanism supporting the Milestone system. Multiple Inception systems can be integrated with a single Milestone system for multi-site monitoring.

The integration means live access and alarm events can be sent to Milestone, allowing a wide range of actions to be triggered within the Milestone system, such as operators being able to compare video footage to a user’s photo to grant access.

Customized notifications

The latest update for Inception also includes the ability to customize notifications that are sent to security managers about events on site as well as the capability to secure the Local Area Network (LAN) and detect if a module has been substituted without permission. A warning now indicates if the LAN is not secured and any detected module substitutions are automatically reported.

Tim Northwood, General Manager at Inner Range, said: “These enhancements add to Inception’s competitive advantage, offering easier and smarter access for security managers, the option to integrate with Milestone XProtect and even better security when it comes to the LAN and rogue module substitution. Inception is a now an even greater access and security system for power and flexibility that’s also quick and easy to install and won’t break the bank.”

Integriti intelligent security solution
Inner Range will showcase new capabilities for its flagship intelligent access control system, Integriti.

Inner Range will be showcasing these enhancements for Inception as well as new capabilities for its flagship intelligent access control and intruder detection system, Integriti, at IFSEC International on June 18-20 at ExCel London at Stand IF1030. The Inner Range stand will include eight large screens to demonstrate the manufacturer’s access control systems and software in action. Inner Range will also be taking part in the event’s ‘Show Me How’ series of demonstrations, with an Inception challenge for installers and integrators.

Inner Range has been a provider in the design and manufacture of intelligent security solutions since it was established in 1988. More than 150,000 Inner Range systems have been installed in over 30 countries. Customers include hospitals and high-security units, colleges, distribution centers and pharmaceutical companies, government and critical national infrastructure.
