Red Lion’s Announces The Launch Of FlexEdge Intelligent Edge Automation Platform That Integrates IT And OT

Published on 30 Jul 2020

Red Lion’s FlexEdge Intelligent Edge Automation Platform now combines the scalability of Linux with the power of Crimson 3.2 software into one user-friendly operating system. This fusion enables a single FlexEdge controller to provide advanced networking, security, and automation. By integrating information technology and operational technology, FlexEdge helps customers reduce costs, improve data security, and increase productivity.

Powered by Crimson 3.2 software, the FlexEdge platform provides customers with maximum flexibility to easily modify controller functionality as application needs change. From advanced networking to automation, one controller does it all. Customers can enable additional functionality through field-unlockable software upgrades that eliminate the need to purchase or
add more equipment, saving both money and unnecessary downtime.

**Critical communications applications**

These new capabilities open doors to new product combinations, further expanding the applications to which the FlexEdge platform can be deployed. With FlexEdge’s modular communications sleds, users can now deploy multi-cellular radio gateways for critical communications applications. And, for environments with demanding requirements, the platform offers multiple isolated serial ports, routable Ethernet ports, optional serial, USB, Wi-Fi, and cellular communications sleds, and field-installable I/O.
