Access control has become a central component for the safety and security strategies of today’s schools, and due to the complicated threats and challenges these facilities face, a school's access control technology must be innovative and intelligent enough to ensure comprehensive protection.

The education sector is a gateway to the future for young people all over the world. But to assure this passage, schools must guarantee their students safety as well as their education. One such example of Vanderbilt solutions at work in the education sector is at a Study Abroad University in London that hosts students from the USA.

Enabling Campus Security
Live and recorded footage can be viewed remotely, and footage can be used in evidence.

The university wanted a security system to protect their student accommodation; in particular, a keyless system that would grant 24/7 access to its students while also enabling campus security to monitor these activities remotely. Vanderbilt’s ACT365 keeps audit trails of who is in the student accommodation by monitoring and recording fob activity.

Additionally, the system produces diagnostic reports on door status and can investigate situations such as door forced, door ajar and break glass activation either locally or remotely. If an incident arises in the student accommodation, ACT365 can link events at doors through video footage so campus security can quickly identify and react. Live and recorded footage can be viewed remotely, and footage can be used in evidence.

Real-Time List

In further protecting students’ safety, campus security can provide pin codes, access fobs, and cards to students. These credentials can be remotely enabled or disabled if required. This can be managed on desktops, laptops tablet, or smartphone device. In the event of a fire or other emergency, ACT365 automatically unlocks all doors allowing students to reach safety.

The ACT365 muster report gives security campus a real-time list of all students in the campus accommodation building. When students exit their accommodation and swipe out, the muster report automatically updates. If someone is missing, campus security can check cameras and call them directly by clicking on their name in the dashboard.

Safeguarding Foundations

Security in education is a crucial issue. It requires thoughtful attention and procedure while
allowing room for agility, adaptability, and dependability moving forward – flagship traits of the Vanderbilt brand.

Students want to attain a higher education in a safe and secure environment while enjoying their first step into varied careers. Vanderbilt’s solutions respond to these expectations and enable active safeguarding foundations to be laid.
